

# For an industry that is constantly evolving.

The Synchronization Experts.

## Invitation to IBC2019

The International Broadcasting Convention is the place to explore new strategies, understand business disruptors, chart future technological progress and uncover the future roadmap of the industry. It hosts over 1,700 exhibitors spanning the media, entertainment and technology industry. It also provides you with an unparalleled platform to meet, address and learn from over 55,000 of the most engaged professionals, press and prospects in international electronic media and entertainment.

Combining a world-class exhibition with free-to-attend feature areas and events, the IBC Exhibition provides the perfect platform for you to network and build relationships with suppliers and customers, discover the latest trends and technologies and drive your innovations and strategy.

Since its inauguration, the IBC constantly increased and became the world's leading media, entertainment and technology show. Meinberg is an AIMS member and its participation in this great event is inevitable and important. Our mission is to be the first choice by delivering high-quality products and synchronization solutions. We invite you at our booth 8.A69, Hall 8 for getting acquainted with the new technologies and industry trends.

If you are interested in a meeting with one of our experts to discuss your needs and ideas, please send us an email to [events@meinberg.de](mailto:events@meinberg.de).

For Meinberg, taking part in this exhibition is a true communicational vector used with utmost efficiency aimed to offer a bright combination of service and advice.

Our presentation at IBC2019 will include:

- Synchronization for SMPTE ST 2110 All-IP infrastructures which use the PTP profile SMPTE ST 2059-2
- Demonstration of our powerful PTP time server – the brand-new microSync
- Product demonstration of the LANTIME M1000 and LANTIME4000 which can be easily integrated in hybrid SDI/IP environments, as well as in ALL-IP scenarios
- The RD/GPS, a fully redundant GPS synchronized time and frequency reference for DVB-T, -T2 or ATSC 3.0 transmission scenarios
- The functionality of PTP will be explained for the visitors by showing a PTP demo
- Interoperability demonstrations with our partners

We look forward to welcoming you at
